

5. Full Stack Developer - Senior Associate

Role Title: Senior Associate - Full Stack Development

Path and Level: P2

Location:

Team: Product Engineering

Supervisor: Manager, Software Development

Position Description:

We are seeking a talented Full Stack Developer to design, develop, and deploy web applications. You will work on both front-end and back-end technologies to build high-performing, scalable systems.

Responsibilities:

- Develop user interfaces using React.js or Angular.
- Build server-side APIs with Node.js, Express.js, or Django.
- Integrate with databases like MongoDB and PostgreSQL.
- Optimize applications for maximum speed and scalability.
- Collaborate with UI/UX designers, product managers, and QA teams.

Qualifications:

- Bachelor's Degree in Computer Science or related field.
- 3+ years of full-stack development experience.
- Proficiency in JavaScript, HTML5, CSS3, and back-end frameworks.
- Experience with REST APIs and microservices architecture.

Preferred Skills:

- Exposure to cloud-native application development.
- Familiarity with CI/CD practices and DevOps culture.
